

# Camera Settings

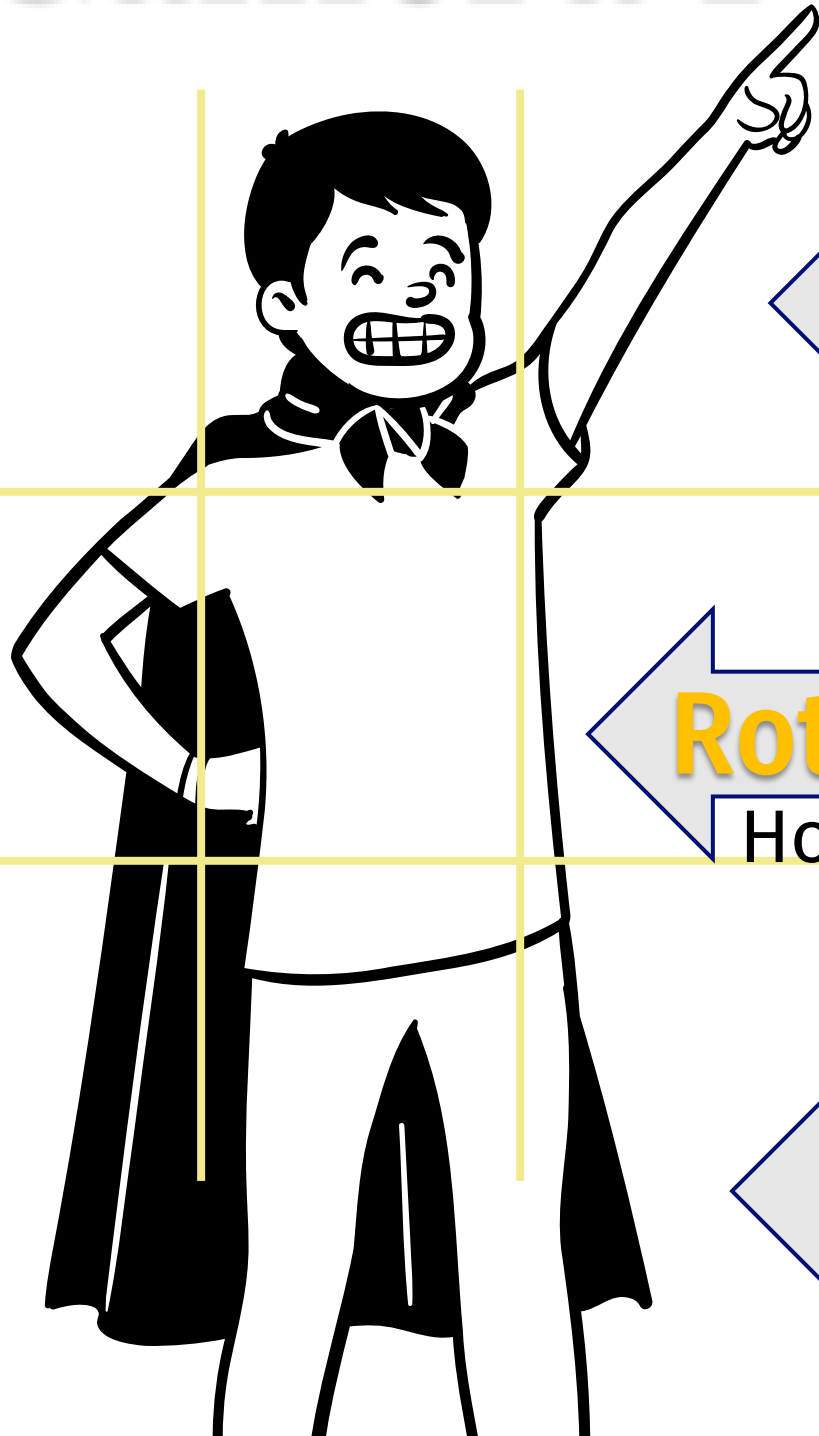

Start

- Aperture f/4 to f/6
- Auto Shutter and ISO

Next

- If your shutter speed drops below 1/50 second, then increase ISO until shutter speed at least 1/50 second.

# Camera Position Ideas

**Focus Point Is Eyes**

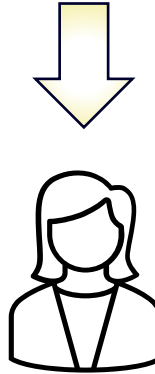

**Rotate Camera to Portrait?**

Hold camera steady with left hand  
under camera/lens,  
elbow against your body.

**Feet May Be Optional?**

# Lighting

**Hair or Rim Light** – Separates model from background

**Secondary Light**  
Dimmer to  
soften shadows  
created by the  
primary light.

**Primary Light**  
Intense light to  
guide viewer  
interest

Primary and Secondary work together to add depth to the model.

Diffusers spread the light evenly, soften shadows & reduce shine.
